Persian Fire Tom Holland 2011-04-21 In 480 BC, Xerxes, the King of Persia, led an invasion of mainland Greece. Its success should have been a formality. For seventy years, victory - rapid, spectacular victory - had seemed the birthright of the Persian Empire. In the space of a single generation, they had swept across the Near East, shattering ancient kingdoms, storming famous cities, putting together an empire which stretched from India to the shores of the Aegean. As a result of those conquests, Xerxes ruled as the most powerful man on the planet. Yet somehow, astonishingly, against the largest expeditionary force ever assembled, the Greeks of the mainland managed to hold out. The Persians were turned back. Greece remained free. Had the Greeks been defeated at Salamis, not only would the West have lost its first struggle for independence and survival, but it is unlikely that there would ever have been such and entity as the West at all. Tom Holland's brilliant new book describes the very first 'clash of Empires' between East and West. Once again he has found extraordinary parallels between the ancient world and our own. There is no competing popular book describing these events.

Acting (Re)Considered Phillip B. Zarrilli 2005-06-28 Acting (Re)Considered is an exceptionally wide-ranging collection of theories on acting, ideas about body and training, and statements about the actor in performance. This second edition includes five new essays and has been fully revised and updated, with discussions by or about major figures who have shaped theories and practices of acting and performance from the late nineteenth century to the present. The essays - by directors, historians, actor trainers and actors - bridge the gap between theories and practices of acting, and between East and West. No other book provides such a wealth of primary and secondary sources, bibliographic material, and diversity of approaches. It includes discussions of such key topics as: * how we think and talk about acting * acting and emotion * the actor's psychophysical process * the body and training * the actor in performance * non-Western and cross-cultural paradigms of the body, training and acting. Acting (Re)Considered is vital reading for all those interested in performance.

Maximum Mini Jeroen Booij 2009-03-15 This book focuses solely on the cars derived from the classic Mini. Small GTs, sports cars, roadsters and fun cars: Mini-derivatives that changed the specialist motoring market completely in the early sixties, and new designs kept it busy for nearly four decades. From the well known Mini Marcos and Unipower GT that raced at Le Mans, to the very obscure but as exciting Coldwell GT or Sarcon Scarab, almost 60 cars are thoroughly researched, described and photographed in this book.

Brunstrom's Clinical Kinesiology Peggy A Houglum 2011-12-07 Now celebrating its 50 years in print, this text has held onto the foundation of its great success, while also being re-invented for today's audience. The focus of this text remains the practical instruction of functional anatomy in order to quickly, and convincingly, guide readers to its use in professional performance. This text is filled with modern applications that will show your students the relevance of foundational material to their future careers.

History of Flotation A. J. Lynch 2010 Flotation was the process that transformed the non-ferrous mining industry and the industries and economies of the world. It was an improbable process; nobody could have imagined 100 years ago that floating high specific gravity particles on water would be the basis of one of the world's great technologies. This book tells the story of the early days of flotation and is as much about the engineers, managers and financiers who supported the experiments and built the plants as it is about the technology that was developed. Flotation practitioners will enjoy reading about the history of flotation machines, the ingenuity applied and the competitive tension between the manufacturers.

Autocourse Alan Henry 2000 Tracing the history of Grand Prix racing since the inaugural race was first held on a wartime airfield at Silverstone in 1950, this book examines how motor racing has evolved in spectacular fashion, developing from a minority sport followed by a dedicated few into the worldwide spectacle it is now. Although the book is broadly chronological, it does not describe every race ever run since the creation of the FIA Driver's World Championship, instead it captures the flavour of each period and identifies the trends and technical developments that characterise it. The history also includes a detailed results section.

First Overland Tim Slessor 2016-03-07 Why Not? After all, no-one had ever done it before. It would be one of the longest of all overland journeys - half way round the world, from the English Channel to Singapore. They knew that several expeditions had already tried it. Some had got as far as the deserts of Persia; a few had even reached the plains of India. But no one had managed to go on from there: over the jungle clad mountains of Assam and across northern Burma to Thailand and Malaya. Over the last 3,000 miles it seemed there were 'just too

many rivers and too few roads'. But no-one really knew ... In fact, their problems began much earlier than that. As mere undergraduates, they had no money, no cars, nothing. But with a cool audacity, which was to become characteristic, they set to work - wheedling and cajoling. First, they coaxed the BBC to come up with some film for a possible TV series. They then gently persuaded the manufacturers to lend them two factory-fresh Land Rovers. A publisher was even sweet-talked into giving them an advance on a book. By the time they were ready to go, their sponsors (more than 80 of them) ranged from whiskey distillers to the makers of collapsible buckets. In late 1955, they set off. Seven months and 12,000 miles later, two very weary Land Rovers, escorted by police outriders, rolled into Singapore - to flash bulbs and champagne. Now, fifty years on, their book, 'First Overland', is republished - with a foreword by Sir David Attenborough. After all, it was he who gave them that film.

Autocourse 60 Years of World Championship Grand Prix Motor Racing Alan Henry 2010-10-01 This book tells the story of the globally successful FIA Formula 1 World Championship from its roots before the Second World War to the present day. Early chapters cover the growth of motor sport from the first recorded race in 1894 through the 1990s. Despite the credit crunch and worldwide recession Formula 1 has still managed to retain its position as a powerful global sport as the calendar heads towards a twenty race season.

Aston Martin Ulster Stephen Archer 2018-07-10 CMC 614 is the registration number of an historic Aston Martin Ulster which has, without doubt, competed in more races than any other Aston. Built in 1935 to the same specification as the factory team cars, it took part in the Le Mans 24 Hour race, the Mille Miglia, and the Tourist Trophy in 1935. Eddie Hall and Count Johnny Lurani were among the celebrated drivers who raced it in its first season. The 1.5 litre Ulster model marked the peak of Aston's pre-war achievements and marque enthusiasts recognize CMC 614 as one of the finest examples of the 28 made - as well as the most raced Aston of all time.

Jaguar XK120 In Detail Anders Ditlev Clausager 2005-12-05 This is the eighth title in the now well-established In Detail series. Its subject, the Jaguar XK120, has become one of the immortals of sports car history and remains one of the most beautiful cars ever built. It took the London Motor Show by storm in 1948, and was built until 1954. Combining extraordinary docility with a startling 120mph top speed, it was the car to be in, whether for cruising California boulevards or racing at Le Mans. The book is published in association with the Jaguar Daimler Heritage Trust and written by the Trust's Archivist. Drawing from company records and archives, he has been able to provide information on the XK120 that has never been available to enthusiasts before. This, and its focus on the XK120 alone rather than on the whole XK family, make this book uniquely informative.

The Q-Schur Algebra S. Donkin 1998-12-10 This book focuses on the representation theory of q -Schur algebras and connections with the representation theory of Hecke algebras and quantum general linear groups. The aim is to present, from a unified point of view, quantum analogs of certain results known already in the classical case. The approach is largely homological, based on Kempf's vanishing theorem for quantum groups and the quasi-hereditary structure of the q -Schur algebras. Beginning with an introductory chapter dealing with the relationship between the ordinary general linear groups and their quantum analogies, the text goes on to discuss the Schur Functor and the 0 -Schur algebra. The next chapter considers Steinberg's tensor product and infinitesimal theory. Later sections of the book discuss tilting modules, the Ringel dual of the q -Schur algebra, Specht modules for Hecke algebras, and the global dimension of the q -Schur algebras. An appendix gives a self-contained account of the theory of quasi-hereditary algebras and their associated tilting modules. This volume will be primarily of interest to researchers in algebra and related topics in pure mathematics.
