Japan's Industrial Technology Development Yoshitaka Okada 2012-12-06 Japan's technology support system has played a crucial role in developing firms technological capability and stimulating their innovation. How has it been done, and why is it effective? The research findings presented here show that what has worked best in Japan is inter-firm cooperative learning, which requires the support of public technology institutions to promote cooperation, disseminate technology, and facilitate innovation. Among the many books published about Japanese technology policies and corporate management, this is the first to show definitively that cooperative learning is important in a wide spectrum of firms, whether or not they are keiretsu-affiliated. With a caveat on the limitations of the Japanese system from an institutional perspective, the countrys techno-governance structure is revealed to be more effective in assembly-oriented industries than in those that are basic-science oriented and employ rapidly changing technology.

The Globalization of Industry and Innovation in Eastern Europe Christian von Hirschhausen 2000-01-01 'The topic is important and neglected and has major implications for the types of industrial policy that make any sense in transition countries. The clear message of this book is that protective science and technology policies would, for the most part, be a total waste of money. What is needed now is internationalization and a demand-driven approach, exactly the opposite of the former nationally based and supply-led systems existing under socialism.' - Paul Hare, Heriot-Watt University Edinburgh, UK 'Here is a book that goes beyond the abstractions and platitudes of conventional "transition economics" to look at what is really happening on the ground in the post-socialist countries of Eastern Europe . . . The Globalization of Industry and Innovation in Eastern Europe presents a provocative but richly documented assessment of the central dynamic issues facing the East European economies today.' - David Dyker, SPRU - Science and Technology Policy Research, University of Sussex, UK In this important book, industrial and enterprise reform over the last decade in Eastern Europe is critically reviewed in light of increasing Eastern integration into the global economy. The authors argue for the further globalization of Eastern European enterprise networks as a condition for recovery and growth in the region. Empirical evidence is provided from five industrial sectors (car industry, telecommunication, shipbuilding, computers, software), including case studies and international comparisons.

Global Business Strategy Kazuyuki Motohashi 2015-03-25 This book presents theories and case studies for corporations in developed nations, including Japan, for designing strategies to maximize opportunities and minimize threats in business expansion into developing nations. The case studies featured here focus on Asia, including China and India, and use examples of Japanese manufacturers. Five case studies are provided, including Hitachi Construction Machinery and Shiseido in China and Maruti Suzuki in India. These cases facilitate the reader's understanding of the business environments in emerging economies. This volume is especially recommended for business people responsible for international business development, particularly in China and India. In addition, the book serves as a useful resource for students in graduate-level courses in international management.
